The IBP Process

What is *Inspiration?*

How ***Editing*** Actually Works...

The Editing Formula

Raw Footage
- Value Packed
- Very Boring

Editing Process

Edited Footage
- Value Focused
- Fun to Watch

How do we create ***Value Focused + Fun to Watch*** Videos?

Spoken Value

Visual Value

How do we do this?
2 things

What to show...

What ***value*** does the creator want to show the viewer?

? ? ? ?

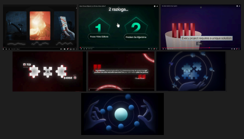
How to Show it

Design
How to make it look good

How do you ***create scenes*** that ***look good*** from zero?

You Don't

Scenes like these are not made from Scratch



2 razloga...
Posao Video Editora

The ***IBP Process***

How do **editors** learn to ***create scenes*** like these?

IBP Process
Inspiration - Breakdown - Planning

Inspiration
Collecting Other well-designed scenes editors made so that you can remake them

Breakdown
breaking down Inspiration into effects, keyframes, and techniques used to make them, so that we can learn to make them too

Planning
Using the inspiration + the effects (used to make the animations we like) to plan out our own animations that look special

Creativity is not new
Nothing can be new

Creativity is taking what has already worked and making it ***in your own way***

That is what makes it new

How we use the IBP in ***Editing***

IBP Process

How do Editors Use the IBP?

You are sent raw footage
- Value packed
- boring to watch

You find out what value you need to show

You collect inspiration (other editors who showed same value well)

You breakdown the inspiration to learn how it was made

You plan an animation using what you learned to show value

You Deliver Edit
- Value focused
- Fun to watch

The *IBP process* helps editors in the following scenarios

1. "I don't know how to show x"

   IBP Process
2. "I don't know what to create here"

   IBP Process
3. "I can't come up with something to show here"

   IBP Process

The Editing Workflow

1 Raw footage

2 IBP Process
- *Asses editing style*
- *Get creativity*
- *Plan all animations*
- *Get Ideas*

3 Cutting & Pacing

4 Creating Animations

5 SFX

6 Music

The ***Inspiration*** Workflow

How to ***Collect Inspiration***

Collecting Inspiration is *Really really simple*

Understand what we are trying to do
We are trying to see Inspiration (Scenes that other editors made that look good)

Where can we find scenes that other editors made... that look good...
Wherever it is... we need to find it... and collect it

2 Ways

Searching for Inspiration

We need **well designed scenes**, so let's search for them.

1 Pinterest
A website that allows you to search for other people's work **based on keywords**

UI Design

Animations

3d Animations

UI Design

2 Behance
A website that allows you to search for **animators and 3d designer's** portfolio's for inspiration

These are ***tools*** we can use to *find other people's work* that looks good ***that we can copy***

Attracting Inspiration

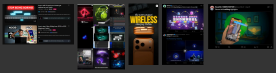
We need **well designed scenes**, so let's let the algorithm recommend them to us

1 Create New Social (Work only)
Instagram - X - YouTube

2 Follow 20 Editors (Editors ONLY)
Create a list of 20 editors to follow

3 Make Sure the Algorithm knows your want Editing Content
Like and engage with Editing Content ONLY

You'll End up with a feed that looks like this...



*With these Strategies you'll never run out of **editing ideas***

But
*How to we **keep track** of them...*

Collecting Assets

Assets that allow you to *collect inspiration*

Inspiration is *rare*, like really rare

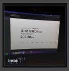
So the moment we see it, we ***NEED to collect it***

*"If you **don't save it**... you **will forget it**"*

So how do we ***save inspiration?***

1 An ***Inspiration*** Folder

Instagram
Create a save folder for editing inspo



X
Save inspiration in your bookmarks

Pinterest
Search for inspiration on Pinterest

Cool Transition Tutorial
Part 7
Editing Inspo

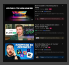
Create a ***folder*** for each platform
This will allow you to save any inspiration you come across within seconds

2 An Infinite ***Inspiration*** Machine

Instagram
Create a feed that pushes inspiration to you

X
Like and engage with more editors

YouTube
Watch tutorials to get more promoted to you



With these 2 methods you'll be able to get ***infinite inspiration***

Common Terms when searching for Inspiration

UI Design

Graphics / Design

Motion Graphics

Abstract / Minimal

Now that we understand how we can *find unlimited inspiration and ideas* and ***save them using saving assets***

We know what to do...
But it's hard to apply it effectively...

Habits to Build

Here are *3 Habits to build* in order to ***always have ideas to create in editing***

1 The Screenshot Habit
Every time you see a cool new idea, program your mind to instantly screenshot it
Cntrl + shift + s → brings up the snipping tool → screenshot inspiration

The Saving Habit 2
Every time you see a cool new idea, program your mind to instantly save it
Click the folder icon → bring the asset into your saved inspo folder

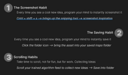
3 Scrolling Habits
Take time to scroll, not for fun, but for work. Collecting Ideas
Scroll your trained algorithm feed to collect new ideas → Save into folder

Now that we

Know how to find infinite inspiration

And understand how to collect it

And Have 3 habits to create in order to apply both of these



1 The Screenshot Habit
Every time you see a cool new idea, program your mind to instantly screenshot it
Cntrl + shift + s → brings up the snipping tool → screenshot inspiration

The Saving Habit 2
Every time you see a cool new idea, program your mind to instantly save it
Click the folder icon → bring the asset into your saved inspo folder

3 Scrolling Habits
Take time to scroll, not for fun, but for work. Collecting Ideas
Scroll your trained algorithm feed to collect new ideas → Save into folder

It's time to *organize* these, by creating ***one board that has ALL*** of these

All the advanced editors do this

The Ultimate Figma File
A *Board* that contains ***all of the inspiration you have ever looked at*** and thought "that looks cool"
organized in a system that allows you to look at it and create ideas

#1 Most Important Asset

1 Go to Figma and Create a new Profile

2 Create a New Board

3 Create an Inspiration Section and a Planning Section

4 Pin this figma board on your browser

And With all these you understand ***EVERYTHING*** about Inspiration

Actionable

- *Create Editor Socials (Work only)*
- *Create an Editor Feed (20 editors)*
- *Create a Pinterest Board*
- *Create the Ultimate Figma Board*

Do not move to next course before completing all these

Inspiration Practice

Let's Practice how we can find, collect, and complete inspiration in real time.

1 *Inspiration*

2 ***Breakdown***

3 ***Planning***

Breakdown & Organization Workflow

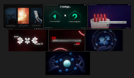
Once inspiration is collected...

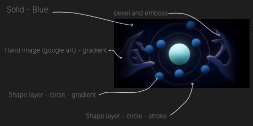
"Breakdown & Organization" is the system that allows you to understand how an animation was made and re-create it

Mimic and *Learn* System

So what is the breakdown and organize workflow?

It's when we take inspiration that looks amazing (clearly doing something right)





Solid - Blue
bevel and emboss
Hand image (google art) - gradient
Shape layer - circle - gradient
Shape layer - circle - stroke

and we *break it down* into assets and effects to

- understand how it was made
- be able to re-create it ourselves
- learn new tricks in editing

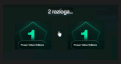
We follow a *breakdown system*

2 razloga...
1
2
Posao Video Editora
Problem Sa Klijentima

this system allow us to look at any animation

1
Posao Video Editora
2 razloga...

Understand how it was made



2 razloga...
1
1
Posao Video Editora
Posao Video Editora

Teach us how to re-create it

When do we do this?

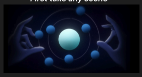
Typically after we have inspiration, we want to learn ***what and how*** *to make scenes...*
this is what we use

So what is ***the breakdown and organize system***

How to Breakdown ***(Assets, Effects, Animations)***

Let me teach you guys how to look at scenes to understand what they are made of instantly

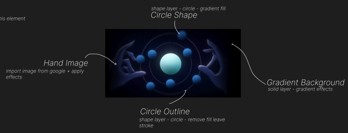
First take any scene



1 *Assets*

Breakdown the assets being used

Ask yourself, "what is this element here"
is it an image?
is it a shape layer?
a solid?
a gradient?
a stroke?



shape layer - circle - gradient fill
Circle Shape
Hand Image
import image from google + apply effects
Gradient Background
solid layer - gradient effects
Circle Outline
shape layer - circle - remove fill leave stroke

Interpret things through real world
Ask yourself, if I were to create this, how do I do it?

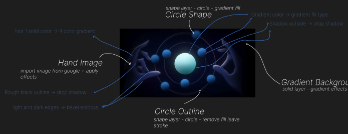
Step by step, if I was in after effects how do I create this

2 *Effects*

Understand which effects were used to get certain looks

Ask yourself, what effects do we add to this asset in order to get this look?

look specifically at every effect that is applied through the lens of an editor



shape layer - circle - gradient fill
Circle Shape
Gradient color → gradient fill type
Shadow outside → drop shadow
Not 1 solid color → 4 color gradient
Hand Image
import image from google + apply effects
Rough black outline → drop shadow
light and dark edges → bevel emboss
Gradient Background
solid layer - gradient effects
Circle Outline
shape layer - circle - remove fill leave stroke

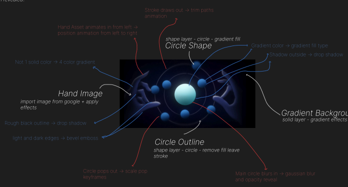
Interpret things through real world
Ask yourself, if I was in after effects right now, what do I add to get this same look?

3 *Animations*

Analyze what animations were used to introduce the assets?

Ask yourself, how was each asset introduced?

Did it pop in?
Did it fade in?
Was it blurry then revealed?

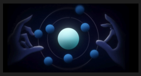


Stroke draws out → trim paths animation
Hand Asset animates in from left → position animation from left to right
shape layer - circle - gradient fill
Circle Shape
Gradient color → gradient fill type
Shadow outside → drop shadow
Not 1 solid color → 4 color gradient
Hand Image
import image from google + apply effects
Rough black outline → drop shadow
light and dark edges → bevel emboss
Gradient Background
solid layer - gradient effects
Circle Outline
shape layer - circle - remove fill leave stroke
Circle pops out → scale pop keyframes
Main circle blurs in → gaussian blur and opacity reveal

Interpret things through real world
Ask yourself, if I was in after effects right now, what properties will I add keyframes to and how to get this animation...

And just like that, it becomes ***easy and simple*** to understand any animation you see...

So let's do this on a few samples



2 razloga...
1
Posao Video Editora
2
Problem Sa Klijentima

If you find this difficult, here is why...

Why ***Technical Skills*** are important

Breaking down ***Assets, Effects, and Animations*** is directly linked to your ***knowledge*** about editing

If you feel like you don't know what effects/how certain looks or animations are made in after effects...

The solution is simple...

Practice More Editing

Hence why this course comes before all of our editing styles...

Breaking down ***Assets, Effects, and Animations*** is directly linked to your ***knowledge*** about editing

The ***Breakdown*** Process

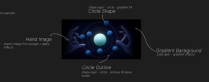
So... in summary...

"Breakdown & Organization" is the system that allows you to understand how an animation was made and re-create it

1 *Assets*

Breakdown the assets being used

Ask yourself, "what is this element here"
is it an image?
is it a shape layer?
a solid?
a gradient?
a stroke?



shape layer - circle - gradient fill
Circle Shape
Hand Image
import image from google + apply effects
Gradient Background
solid layer - gradient effects
Circle Outline
shape layer - circle - remove fill leave stroke

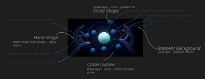
Step by step, if I was in after effects how

2 *Effects*

Understand which effects were used to get certain looks

Ask yourself, what effects do we add to this asset in order to get this look?

look specifically at every effect that is applied through the lens of an editor



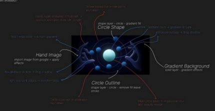
shape layer - circle - gradient fill
Circle Shape
Gradient color → gradient fill type
Shadow outside → drop shadow
Not 1 solid color → 4 color gradient
Hand Image
import image from google + apply effects
Rough black outline → drop shadow
light and dark edges → bevel emboss
Gradient Background
solid layer - gradient effects
Circle Outline
shape layer - circle - remove fill leave stroke

3 *Animations*

Analyze what animations were used to introduce the assets?

Ask yourself, how was each asset introduced?

Did it pop in?
Did it fade in?
Was it blurry then revealed?



Shape draws out → trim paths animation
Hand Asset animates in from left → position animation from left to right
shape layer - circle - gradient fill
Circle Shape
Gradient color → gradient fill type
Shadow outside → drop shadow
Not 1 solid color → 4 color gradient
Hand Image
import image from google + apply effects
Rough black outline → drop shadow
light and dark edges → bevel emboss
Gradient Background
solid layer - gradient effects
Circle Outline
shape layer - circle - remove fill leave stroke
Circle pops out → scale pop keyframes
Main circle blurs in → gaussian blur and opacity reveal

Using the ***breakdown process***... we are able to

- ***understand*** how the scene was created
- ***learn*** to create it again ourselves
- ***learn*** new editing techniques

Breakdown Practice

Let's Practice how we can breakdown Assets, Effects, and Animations in real time

Actionable

- *Choose 3 new animations from your inspiration board*
- *Use the 3 step breakdown process to break them down*

Do not move to next course before completing all these

1 **Inspiration** 2 **Breakdown** 3 **Planning**

The *Planning* Framework

Why are we collecting inspiration and breaking them down to understand them?

*It's so that we can then **take what we have learned** and **create** our own new animations for the client's video*

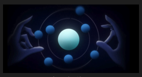
*And to do that... we use **Planning***

What is the *Planning Framework*

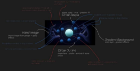
Scenes other editors made that look amazing

The Assets, Effects, and Animations used to create the scenes

Planning: The framework that allows you to take ***inspiration*** and ***breakdowns*** and ***turn them into animations you can create in your video***

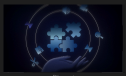


Inspiration



Circle Shape
Hand Image
Gradient Background
Circle Outline

Breakdown



Planning

So - How can we do this?

The Planning Framework

Planning: The framework that allows you to take ***inspiration*** and ***breakdowns*** and ***turn them into animations you can create in your video***

When do we use this as editors?

Raw footage

Contains Spoken Value... → *Word word **value** word*

*Now we know **what** we need to show the viewer...*
*But **how** do we show it?*

*Word word **value** word* → *We collect **Inspiration*** → *Then we **break it down***

*But then how do we **take this information**, and **create an animation** we can make for this scene **to showcase the value?***

The Planning Framework

The ***4 Stages*** of Planning

There are 4 stages to going from ***nothing*** to having a ***planned out animation***

1 Style — 2 Inspiration — 3 Breakdown — 4 Planning

Stage 1 - ***Choosing Style***

1 Style

First, once we have found the **value** of the scene

*Word word **value** word*

We wanna learn how we can show it...
But **before we go and collect inspiration**

First we must choose **style**

What ***style*** fits what my character is talking about?

This clearly depends on the **subject** your creator is talking about.
And you must choose the style accordingly...

Some Common Styles that we see all the time

Short-Form

Cinematic

When it's Used
- Short-Film style content
- Motivational Videos

Common Attributes
- Mostly Broll
- No animations
- movie clips
- Hyper Intense SFX
- Motivating Music
- Emotional Storytelling
- Extremely Simple

Minimal

When it's Used
- Clean Un-Edited Content
- Raw Value Focused
- Higher End Audience

Common Attributes
- No animations
- Simple white text
- Sans and script text
- basic zoom outs + blur
- simple Broll and footage

Simple Animated

When it's Used
- Clean Short-Form Content
- Educational but high-end

Common Attributes
- White Backgrounds
- Paper Textures
- 2 Tone color palettes (white and random)
- 1 object oriented scenes
- mostly empty scene set ups
- sans + script fonts
- dull colors 60%

3D Visual

When it's Used
- Heavy high-end content
- Visual Oriented Brands

Common Attributes
- Lots of movement
- 3D Scenes
- Bright Vibrant Colors
- Lots of Textures
- 3D Object Scenes
- Camera Movement Transitions

Talking Head

When it's Used
- Trendy Short-Form Viral Content
- Talking Head Videos

Common Attributes
- Bright Text
- Vibrant Colors
- Vibrant Animations
- UI Animations
- On-Screen Text Graphics
- Vibrant Icons

Long-Form

Minimal Clean

When it's Used
- Clean un-edited content
- Raw value focused
- Higher End Educational

Common Attributes
- White Backgrounds
- Paper Textures
- 2 Tone color palettes (white and random)
- 1 object oriented scenes
- mostly empty scene set ups
- sans + script fonts
- dull colors 60%

UI Design

When it's Used
- Business Videos
- Educational Entertaining
- High-End

Common Attributes
- Rounded Cornered Shapes
- UI Design
- 3 Tone Colors
- Simple Animations
- Simple Scenes with Shapes
- Website look

High End Visual

When it's Used
- Animated Storytelling
- Story focused content

Common Attributes
- AI generated videos
- Lots of vibrant colors
- story oriented scenes
- UI Animation Incorporated in scenes

Motion Design

When it's Used
- Educational Entertaining Videos
- AI Saas animations

Common Attributes
- Simple Shapes
- Simple Icons
- 3 Tone Colors
- Clean Scenes
- Minimal Animations
- Minimalist Aesthetic

So now we need to choose a **style** in order to start planning the animations...
So how do we choose which style to use?

2 Scenarios

both revolve around the value we are trying to show

*Word word **value** word*

Client Has Brand Style
In which case simply use the style they recommend

Client Wants Style Created
In which case use the above styles to asses best method to deliver value

*Common **Niches** Associated with Styles*

Motivational Niche → ***Cinematic***
Educational High-End → ***Minimal***
Educational Entertaining → ***Simple Animated***
Influencers and Visually Oriented → ***3D Visual***
Entrepreneurs Selling Online → ***Talking Head***
Educational Classical → ***Minimal Clean***
Business and Education → ***UI Design***
Visual focused Content, Documentaries → ***High End Visual***
Educational Modern → ***Motion Design***

*And Once you decide which **style** you want to go with... then...*

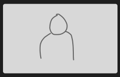
Stage 2 - *Gathering Inspiration*

2
Inspiration

We know what we need to show, and the style in which we need to show it
*Word word **value** word* ***Style***

*We go and find **inspiration** that fits that exact description*
*Inspiration that shows **this type of value** in that specific style*

Here's an example



Client is talking about making money online using SMAA business

→ ***SMAA Business***
→ ***Value: SMAA***
→ ***Style: Business - UI Design***

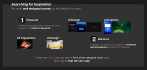
*Inspiration on **UI Design Scenes** showing **1 subject***

*Inspiration that shows **this type of value** in that specific style*

How did we do this?

We use our inspiration collection methods
- *Pinterest*
- *Instagram*
- *Saved Folders*

or even better
- *The Ultimate Figma File*



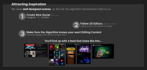
Searching for Inspiration
We need **well designed scenes**, so let's search for them.

1 Pinterest
A website that allows you to search for other people's work **based on keywords**

UI Design
Animations
3d Animations
UI Design

2 Behance
A website that allows you to search for **animators and 3d designer's** portfolio's for inspiration

These are tools we can use to *find other people's work* that looks good ***that we can copy***



Attracting Inspiration
We need **well designed scenes**, so let's let the algorithm recommend them to us

1 Create New Social
Instagram - X - YouTube

2 Follow 20 Editors (Editors ONLY)
Create a list of 20 editors to follow

3 Make Sure the Algorithm knows your want Editing Content
Like and engage with Editing Content ONLY

You'll End up with a feed that looks like this...

But we filter inspiration through the lens of
- *1 Subject Value*
- *UI Design Style*

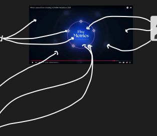
Now that we know the ***value*** we want to show
And the ***style*** that fits it best
And ***inspiration*** on what it should look like

It's time to ***break it down*** and understand how we can re-create it

Stage 3 - *Creating Breakdowns*

3
Breakdown

Which is where we run our inspiration through our breakdown process



1 ***Assets***
Breakdown the assets being used

2 ***Effects***
Understand which effects were used to get certain looks

3 ***Animations***
Analyze what animations were used to introduce the assets?

This will show us everything we need to know in order to be able to create this style

Which means we now know

the ***value*** we want to show

And the ***style*** that fits it best
And ***inspiration*** on what it should look like
And The **Assets, Effects, Animations** we can use to achieve it

Which means we can now bring all this together to create the scenes for our clients video

Stage 4 - *Planning New Animation*

Which is where we start planning our animations

4
Planning

We use the ***value*** we need to show
SMAA Business

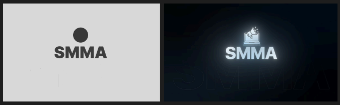
The ***style*** we chose
UI Design - Business

The ***Inspiration*** we collected accordingly

And the ***Breakdown Information*** we found

Circle Shape
Hand Image
Gradient Background
Circle Outline

To Finally Plan out what our scene will look like



How did we create this?

1 Style
2 Inspiration
3 Breakdown
4 Planning

TO better understand this, let's practice on 3 scenarios

Scenario 1

Client teaches productivity (educational high end clean)

talking about "Coders like steve for example, spend only 10% of their time on coding"

wants a scene that shows this value to the viewer to deliver that only 10% of the time is spent on coding

Value
10% of time
Coders like steve
graph of 10% only

1
Style

Productivity + Educational high end clean →

Minimal Clean

When it's Used
- Clean un-edited content
- Raw value focused
- Higher End Educational

Common Attributes
- White Backgrounds
- Paper Textures
- 2 Tone color palettes (white and random)
- 1 object oriented scenes
- mostly empty scene set ups
- sans + script fonts
- dull colors 60%

watch other videos on productivity and check out animations

2
Inspiration

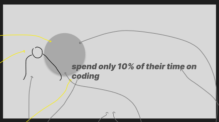
3
Breakdown

Assets
- white backgrounds
- grid textures
- null colors
- simple graphics
- desaturated images

opposite
here's 3 things I would focus on

Effects
- Drop shadows
- Gradients

Animations
- Pop up blur
- Pop up fade in
- slow



spend only 10% of their time on coding

4
Planning

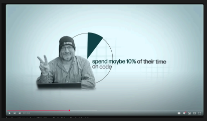
Value
10% of time
Coders like steve
graph of 10% only

Assets
- white backgrounds
- grid textures
- null colors
- simple graphics
- desaturated images

Effects
- Drop shadows
- Gradients

Animations
- Pop up blur
- Pop up fade in
- slow

Final Result



spend maybe 10% of their time
on code

Scenario 2

Client is Iman Gadzhi

talking about "productivity is really just a 3 piece puzzle that needs to be solved"

Value
productivity
puzzle
3 piece

1
